Summary

Software Developer with a B.S. in Computer Science and hands-on experience designing, developing, and shipping scalable backend systems, automation pipelines, and monetized web applications. Proficient in Python, Go, and SQL, with a growth mindset and a track record of rapidly adapting to new technologies and delivering high-quality solutions that drive measurable business impact.

Skills

Languages	Python, Go, C++, Java
Technologies	SQL, PostgreSQL, Git, Docker, Selenium, Stripe, Streamlit, REST APIs, SFTP
Infrastructure	Docker (containerization), Cloudflare, CI/CD workflows
AI-Assisted Development	Claude Code, OpenAI Codex (accelerating development, debugging, and testing workflows)
Concepts	Scalable System Design, Backend Development, Data Pipelines, Process Automation, Unit & Integration Testing
Soft Skills	Cross-functional collaboration, adaptive problem-solving, fast learner with a growth mindset

Experience

Software Developer Jan 2024 – Present

Microimaging Source Inc.

- Designed and shipped Python and SQL analytics pipelines for business clients, **reducing reporting time by 40%** by replacing manual workflows with automated, maintainable solutions
- Architected a multi-county government document ingestion framework supporting local-filesystem, SFTP, and Selenium-based web delivery modes, **cutting manual processing time by 90%**
- Built high-performance backend services in Go to improve reliability, scalability, and throughput; leveraged Claude Code and Codex to accelerate development and debugging cycles
- Established unit and integration test suites in collaboration with teammates, raising code coverage and preventing regressions in production

Math Tutor Aug 2022 – Jan 2024

Parliament Tutors

- Delivered one-on-one instruction in algebra, calculus, and statistics; maintained a 5-star client rating by adapting to individual learning needs and communicating complex concepts clearly

Projects

County Document Ingestion Framework *Python, SFTP, Selenium*

- Architected an extensible, inheritance-based ingestion framework across multiple government counties, with template base classes supporting local-filesystem, SFTP, and Selenium scraping delivery modes
- Designed fault-tolerant batch processing with per-batch failure isolation, zip integrity validation, and duplicate-tracking state — preventing data loss and silent re-ingestion across **hundreds of records per run**
- Built a multi-format image normalization pipeline (JPEG, PNG, TIFF, PDF) converting to archival CCITT Group 4 TIFF, with county-specific logic confined to minimal subclass overrides

Overtime Deduction Calculator *Python, Streamlit, Stripe, Cloudflare*

- Designed and shipped a **monetized** full-stack web app with Stripe payments, gated access control, automated report generation, and bilingual (English/Spanish) support — serving real paying users with no unplanned downtime
- Architected a lightweight, database-free system and leveraged Claude Code and Codex to rapidly prototype and iterate on features

Client Analytics Service *Python, SQL, Go*

- Designed a scalable backend to parse document workflows and surface business insights; optimized SQL queries to handle large document sets with **sub-second response times**

Education

B.S. Computer Science, *Cum Laude* Dec 2024

University of Florida

Languages: English | Spanish
